WINTER SALE HEATED WIPER BLADES

Everblades® have a specially designed rubber squeegee with a hole in it. We insert a heating element inside this hole so that the rubber squeegee can be heated!

The kit you purchase comes with two wipers and all of the wiring, including a lighted toggle switch. When installed, you turn on the switch and within minutes the wipers warm up to melt accumulated ice and snow. Left on, they will keep the wipers free to do a proper job of keeping your windshield clear in winter driving conditions.

How often have you had to roll down your window in freezing weather and reach out to try and smack the wiper to knock off the ice buildup? With Everblades®, this risky procedure is eliminated, because they never allow the snow and ice to build up on your wipers in the first place. Everblades® are durable and long-lived!

Standard wipers should be replaced every 6 months, but people generally don't replace them for much longer — until they can hardly see any more in inclement weather! Everblades® are made with a specially designed and extruded Silicone rubber material that is much more durable and long-lived than standard rubber squeegees. The heat function can also help keep the wiper pliable in extremely cold weather, further enhancing the squeegee function.

Everblades® do not have to be removed in the summer! They function extremely well all year 'round. The heat function can even be used in the summer time to assist wipe effectiveness and road film removal. We know of truckers that have used the same set all year long for over two years or longer without needing refills!

ANY SIZE TO FIT YOUR TRUCK

The complete kit comes with wipers, all wiring and a lighted toggle
switch
